For more products and your special production requests, visit our website or contact us.

## COLLAR

It is specially designed for the comfort of our pets. In this series, soft filling material is cushioned, sewn and combined under the natural leather.

The Vegetal leather we use in our collar product is obtained from cowhide tanned in Turkey using environmentally friendly and sustainable methods using vegetable tannins.

Due to its unique skin structure and appearance, each leather is a material that makes its user feel special. Since real leather is a natural material, it can be negatively affected by external factors such as bad weather conditions and sunlight.

To protect against these effects, cleaning products made of real leather at regular intervals and supporting them with protective oils will extend the life of these products.

This type of leather can give some color due to its structure.

The products in which we will use this material are specially produced to meet standards such as required tear strength, elongation strength and resistance to climatic conditions.

The lower filling part is completely covered with soft leather.

With its texture that fits perfectly around our friends' necks, our filling pads are a wonderfully soft filling material that offers extra comfort for both our friends and pet owners.

### LEASHFATHER

Our metal buckles, free nickel buckles, metal rings and metal bridges are our own special designs. Thanks to long-term research and technical features, these products are perfectly compatible with our pet products; It provides durability and ease of use. Our products are completed with chrome plating, which has high resistance to rust.
